

BASIC HARD DRIVE PUBLISHING

Let's start by looking at the process to publish images out to your hard drive. You click the setup button and open the Publishing Manager. Give the service a name that helps you remember the settings, or for your intended use of the service. You then need to choose a place to publish the photos to, which can't be changed after you've saved it.

You then work down through the settings, choosing the ones that are appropriate for the need you have. You'll want to make a new Publish Service for each different group of output settings you need. So publishing full-sized images should be a different service than publishing images that are downsized for iPad.

Finish by saving that Publish Service. Once you've done that, you can create Published Folders. This is almost exactly like creating the various types of Collections, including Published Folder Sets, Published Folders and Published Smart Folders. Each of these folders creates a new folder in the *Publish Services* panel.

VIDEO 9-2 PUBLISH TO HARD DRIVE (4:12)

In this video, we see how to set up Publish to Hard Drive.

Here are the steps

The steps outlined here are for publishing a collection of images to an iPad or iPhone on Apple. You can use similar methods on different devices and different platforms.

1. Set up to Publish to Hard Drive.
2. Choose a name for the service, a location for the folders, size, format, etc.
3. Rename the files with a sequence number in front of the file name if you want them to line up in order.

Creating Published Folders

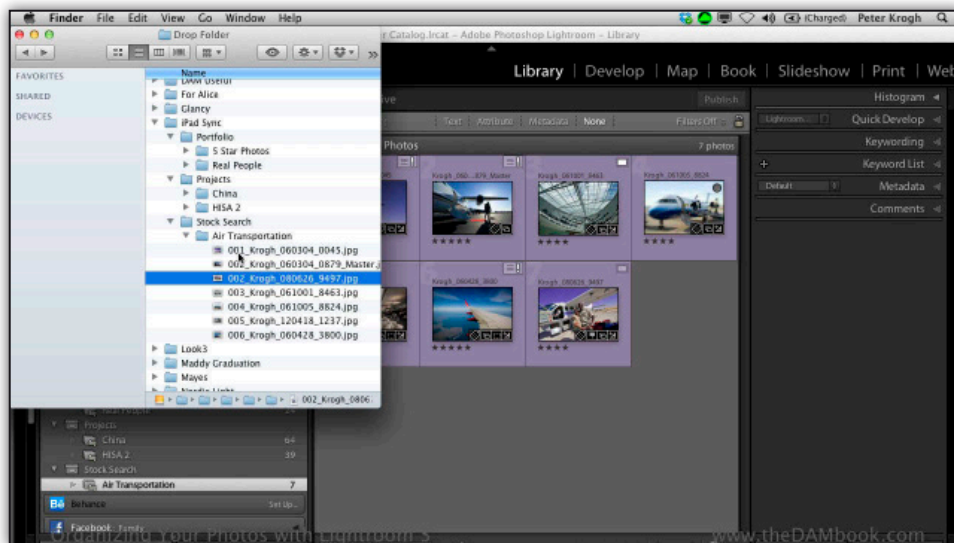

In part two of Publishing to a Hard Drive, we see how to create Published Folder Sets, Published Folders and Published Smart Folders. We also see how to add images and start the Publish process.

Refining and Republishing

Lightroom assumes that you will want to keep your published images updated.

Whenever you add photos to the Publish Folder, they will show up at the top in a group called New Photos to Publish and the Publish button will become live. Hitting the Publish button will add these to the existing group.

Whenever you make a change to an image that has been published, Lightroom marks that image for republication. If you would like to update the photo, simply hit the Publish button. If you don't want to republish, then you can right-click and choose Mark as Up-To-Date.

VIDEO 9-3 CREATING AND UPDATING PUBLISHED FOLDERS (6:12)

You can add images to Published Folders in the same way that you add to Collections.

Here are the steps

1. Make a Folder Set inside the new Publish Service.
2. Make a Published Folder for each group of images you want to publish.
3. Add the images to the Published Folder.
4. When you're ready, hit the Publish button.
5. Make new Published Folders as desired, and update files as desired.
